Webinar ID: 944 0023 7842

Passcode: 044856

Phone only: (669) 900-9128

RSVP Requested

## Speakers

**Emily Beach**  
SMCTA Chair & Burlingame City Council  
Member

**Charles Stone**  
SamTrans Chair & Belmont Mayor

**William Riggs**  
Associate Professor - Autonomous  
Vehicles & the City Lead  
University of San Francisco

**Steve Kuciemba**  
National ITS/CAV Practice Leader  
WSP

**Virginia Lingham**  
Senior ITS/CAV Program Consultant  
WSP

## Please Join Us!

Progress toward autonomous personal and shared autonomous transit vehicles (AV/SAV) has been steadily increasing over the past decade. However, most of the research and communications about the technology has been centered on how vehicles themselves adapt to the environment around it, rather than how cities should be preparing for the transition to a future that may include connected transit, autonomous shuttles, and driverless cars.

This virtual workshop, aimed at better understanding how autonomous technologies may impact travel and mobility in San Mateo County, will provide an overview of the current policy framework in California and beyond, and discuss current autonomous and connected vehicle technologies for personal, shared, and transit vehicle applications. Participants will collaborate on ideas regarding how local jurisdictions, SMCTA, and SamTrans can start thinking about how transit, project/infrastructure, and policy decisions will need to adapt to an AV/SAV future.
