skyTran[®]

Hello,

Cities and Public Transit Agencies across America are strategizing how new transportation technologies can be implemented to facilitate economic growth, improve ridership, and operate cost effectively. skyTran is developing an on-demand transportation solution that will deliver a step change in speed, cost, and user experience.

SkyTran's solution incorporates proprietary magnetic-levitation technologies and grade-separated, aerial guideways to enable autonomous, point-point travel. It can be rapidly deployed within traditional transit corridors or across city-wide, mesh transit networks, even in highly congested alignments. Our unique approach enables a cost effective, high-capacity, and scalable alternative to current public transit modes.

Want to participate?

Join our Introductory Webinar!

Register

We are inviting a select list of accomplished public transit professionals and community leaders to share their expertise, input, and feedback regarding the solution we are developing.

Qualified participants get to learn about our revolutionary technology and help shape the future of public mass transportation. Joining an introductory webinar is the best way to start the engagement process. If you have any questions or prefer a different approach to engage, feel free to reach out to us at events@skytran.com.

We want your expert insights and opinions!
